“

“ I noticed the results immediately and continuously over the next few weeks after my treatment. The SaltFacial helped diminish my hyperpigmentation but didn't prevent me from going outdoors.”

- Tina Assi, Patient

*Dermatologist recommended wearing SPF outdoors at all times.*

1

## RESTORE Sea Salt Resurfacing

Reveal your Glow. Fine crystals of pure, natural sea salt are projected through a unique handpiece that's swept across the skin. Sea salt is both a natural healing element and will hold moisture in at a cellular level, making it an ideal treatment for all skin types. This painless first step removes the dead skin layer that dulls the complexion and challenges even the best skin care products to absorb effectively.

2

## REPLENISH Aesthetic Ultrasound

Nourish and Replenish. Circulation and oxygenation are key to healthy, beautiful skin. This relaxing second step increases microcirculation, which helps topically applied products absorb down deep where they can be most effective.

3

## REJUVENATE LED Phototherapy

Rest and Rejuvenate. The SaltFacial® Phototherapy uses powerful LED light energy to super-charge cell turnover, helping skin heal and become more beautiful, naturally. This third and final step is completely pain-free and so relaxing that many patients fall asleep during this part of the treatment.

Beauty Has  
Always Been  
More Than  
Skin Deep.
